Project Title: Savoy Hotel Website

I want to build this website as a continuous singular page, but with different sections. The navigation bar at the top would bring you to the correct section when clicking it. The Savoy Hotel is a very historic establishment, so presenting information in a continuous manner in chronological order would help tell the full story of the hotel properly.

- Introduction – Introduce what the hotel is, where it's located, when it was built/opened, its size/# of rooms, who designed it, who it is/was owned by, etc.
- History – Chronological timeline of its history. When it was built, its historical significance, famous people who have managed/affiliated with the hotel. Doesn't have to be too in-depth.
- Notable Guests – Famous people who have stayed at the Savoy.
- The Arts & Pop Culture – How the hotel influenced famous artworks, including Monet's; its artist-in-residence program; the hotel in films and novels.
- Fun Facts – miscellaneous fun facts about the hotel.
- Footer – This section will include sources for the Wikipedia page and photos.
